

We are looking for a Data Scientist to join our Analytics & Data Science unit.

## Responsibilities

- Work with large amounts of data to draw actionable insights for a variety of stakeholders in the company.
- Create automated processes for data manipulation (e.g., stored procedures).
- Design and create automatic reports and advanced interactive dashboards to promote data-driven decision making across the company.
- Apply machine learning for segmentation, clustering and forecasting.
- Apply advanced machine learning (e.g., deep learning).
- Plan and supervise tracking of user interaction with product features.
- Perform analysis and AB testing for product optimization.
- Become main focal point for business users as a Data Science Expert.

## REQUIRED SKILLS

- B.Sc. in computer science/Information Systems or related field
- High level of proficiency in SQL - a must
- Experience working with Python\R and machine learning packages (i.e., sklearn, Keras, Tensorflow, etc.) - a must
- Experience working with data visualization tools (Tableau, QlikView, d3, etc.)
- Ability to turn large amounts of ambiguous data into a concise, meaningful story.
- Experience with experimental design and statistical data analysis - an advantage
